The Art of Inch Loss

Northamptonshire

Your questions answered...

Ultrasonic Liposuction is a revolutionary treatment which in turn brings many questions...

Q. Does it hurt?

Absolutely not; be prepared to lie back and relax, and allow us to pamper you, and melt away those stubborn areas painlessly using an ultrasound wave.

Q. Is it safe?

Our procedure is totally safe and we are fully qualified to carry out Body Electrical treatments. This treatment is pain free, completely non-invasive and totally relaxing. There are some medical contraindications that we do need to be aware of however; a full medical questionnaire will be carried out during your initial consultation to ensure maximum safety for you. Please feel free to call us should you have any specific questions.

Q. How many inches will I lose?

Our research demonstrates that a client can lose up to 1 inch during the first treatment. It is not unusual for 2½ inches to melt away during the first 6 treatments. The general rule of thumb is, if there is fat to melt it will disappear; the more you have, the more you lose! Follow our aftercare for maximum results.

Q. Will the melted fat relocate into other areas of my body?

This is a common question, and the answer is No. Once the fat has been melted it disappears out through the lymphatic system and the body disperses of it naturally with no side effects.

Q. What areas of my body can I have treated?

We have treatments available for all body areas; from the chin down to the knee area. For peace of mind, we use an alternative treatment for soft tissue such as the neck or breast tissue.

Q. Is Ultrasonic Liposuction (Lipo) for girls only?

No, our treatments are often carried out on ladies and gentlemen who want to make the most of their appearance.

Q. How often do I have to have my treatments?

For maximum results we recommend 2 appointments per week, with a minimum of 72 hours in between. We recognise that you will have other lifestyle commitments, so please be assured that results will still be achieved even if you only have 1 session per week.

Q. What about aftercare?

You will be advised of aftercare for maximum results before and after your treatments. Full aftercare information is also available on our website www.body-sculpture.net/treatments/non-invasive-liposuction/ If you have any questions following your treatment please don't hesitate to discuss them with us.

Q. Does it really work?

Yes, of course it does, on the basis that you listen to advice and aftercare instructions, take action, then simply watch your body respond. This revolutionary technology will soon enable you to become your own best friend.
